Dear Valued Customer,

Twenty years ago Hoffman Engineering pioneered the Goggle Test Equipment Market with the development of the ANV-126-001 - this trend continues today with Hoffman's introduction of the new technologically advanced ANV-126A-001.

Currently offering the most advantageous price and most expedient turn around, present owners of the ANV-126-001 are invited to upgrade, and transition their units to one of the following:

- **ANV-126A-UG/F** – This is supplied in “kit form” for in-the-field upgrades, allowing the end-user to keep the existing accessories and case.
- **ANV-126A-UG** – This is supplied through a “Hoffman factory return program”, allowing the end-user to keep the existing accessories and case.

Going forward, Hoffman will continue to offer calibration services for the ANV-126-001 (although this product is now obsolete); however, effective January 1, 2012 repair services for the ANV-126-001 will no longer be supported by Hoffman.

For additional information and exceptional pricing packages, please contact Hoffman Engineering:

ANV-126A FIELD UPGRADE

Product Outline

The ANV-126A Digital NVD Test Set is available as an “in the field” upgrade to your existing ANV-126-XXX Test Set.

This upgrade configuration allows you to keep your existing ANV-126-XXX accessories and case. The -UGF upgrade is performed by your PMEL (or equivalent) at your location by swapping out the Primary Module with the new Digital Module. The old module is then returned to the factory. All of your existing accessories are fully compatible to the new ANV-126A-UG/F configuration.

Special ordering instructions apply. Please contact your Hoffman Representative for additional information.

Product Configuration

DESIGNATION:	ANV-126A-UG/F
