

NVG-104

INSPECTION SCOPE

PRODUCT OUTLINE

The NVG-104 Inspection Scope is designed to allow the user to inspect an instrument or an entire cockpit:

- Preflight
- On a short term reoccurring basis, weekly or monthly
- When new equipment has been installed into the cockpit
- A cockpit instrument has been removed from the aircraft for any reason
- When the equipment may have been damaged and/or repaired
- When local protocol calls for aircraft inspection

The NVG-104 has a precisely tuned and calibrated filter that only allows the user to view energy that would decrease night vision goggle acuity. The inspection scope is an easy to use, cost effective way to inspect a crewstation to ensure flight safety.
